Probably more than you think.

Probably more interconnected than you think.

Probably *much* more complex than you think.

No, but you can make it worse.

The file `data/containers.pdf` hasn't been created from `data/containers.dot` yet.

We attempted to create it with:

```
'dot -Tpdf data/containers.dot -o data/containers.pdf'
```

but that seems not to have worked.

dot said :

```
"Error: dot: can't open data/containers.dot: No such file or directory "
```

► Now you have three clocks and don't know what time it is.

And not just with respect to details.

```
FROM [REDACTED]matlab-base

USER root

RUN chmod 755 /usr/bin/mlrtapp,[REDACTED]compiled
ENV PATH="/usr/bin/mlrtapp:${PATH}"

# Installing Python with miniconda
RUN apt-get update && \
    apt-get install -y build-essential && \
    apt-get install -y wget && \
    apt-get install -y git && \
    apt-get clean && \
    rm -rf /var/lib/apt/lists/*

ENV MINICONDA_VERSION 23.1.0-1
ENV PYTHON_VERSION py39
ENV CONDA_DIR /home/miniconda3
ENV LATEST_CONDA_SCRIPT "Miniconda3-${PYTHON_VERSION}_${MINICONDA_VERSION}-Linux-x86_64.sh"

RUN wget --quiet https://repo.anaconda.com/miniconda/${LATEST_CONDA_SCRIPT} -O ~/miniconda.sh && \
    bash ~/miniconda.sh -b -p $CONDA_DIR && \
    rm ~/miniconda.sh
ENV PATH=$CONDA_DIR/bin:$PATH
```

► But good solutions are irresistible.

Key Discussion Items

Concepts:

- ▶ distributed workload;
- ▶ testing and sustainability;
- ▶ access and transparency;
- ▶ adaptability;
- ▶ resource integration;

Questions:

- ▶ What infrastructure do you use?
- ▶ How do you manage your software stack?
- ▶ Do you benefit from controlling your environment?
- ▶ What advantages do you gain from open source?
- ▶ Do you treat scientific software stacks differently from other software, if so, why?
